NV NIBRS

Version 2.0, September 2017

The Nevada Uniform Crime Reporting (UCR) Program has provided technical specifications for the transmission of NIBRS data in alignment with the FBI's National Incident-Based Reporting System Technical Specification manual (Version 3.1, dated 02/01/2017). Nevada's technical specifications include data changes and additions to the standard FBI NIBRS Program. These changes affect some existing FBI data elements. The additions are required to fulfill state mandated data collection and reporting per Nevada Revised Statutes. This document includes a section highlighting all changes and additions by segment, and a detailed list of the specifications by segment.

Data validation checks should be completed at the agency level, within the law enforcement agency's Records Management System, and at the state level, within the State of Nevada Repository system. These validation checks should ensure all FBI and state mandated data elements conform to the specifications laid out by the FBI in their NIBRS Manual and Technical Specifications, and the specifications laid out in this document.
The Nevada UCR Program currently uses a manual process to aggregate and analyze crime data. To facilitate the more complex NIBRS format a new central data repository and database is scheduled to deploy in the 3rd quarter of 2018. The data repository application will consist of a web-based user interface and database. Agencies will export the NIBRS Flat-File or XML file from their Records Management System and log into the data repository web interface and upload the file. The system will process the file immediately and show any errors as they are found. Agencies can then correct these errors and upload the file again.

If the FBI has the capability to accept XML submissions prior to Nevada's implementation of NIBRS, Nevada UCR Program will implement NIBRS with XML data submission capability to FBI beginning at the date of implementation.
The State of Nevada will provide a means of mapping each crime incident reported to the appropriate NIBRS code. This mapping will be done by using the Nevada Offense Code (NOC) file. In its current form, the NOC (pronounced "knock") Table has been used for over 7 years within the Nevada Criminal Justice Community. It provides a single, comprehensive catalog of all crimes that a person can be charged with and adjudicated by Nevada state and municipal courts.
